How to Boot from USB drive?

Step 1: **Create** "**recovery**" folder in USB drive

Step 2: **Copy KD_P9000FTA_HD.bin** or **KD-P9000E_HD.bin** file to the "**recovery**" folder of USB drive.

Cautions)
1. USB drive shall be FAT32 file format. Its doesn't support NTFS format.
2. Only one related .bin file shall be in recovery folder.
3. Do not change the file name. If it is different, the boot from USB will not work.

Step 3: **Attach** the USB device to the STB via any available USB port.

Step 4: **Turn** power on while pressing **OK** key on front panel.

Step 5: **Keep** pressing OK key until showing "**Lxxx**" message on LED of front panel.

Step 6: **Check** TV screen that s/w is recovering(updating) by USB drive.

Step 7: The STB will **restart** automatically after finishing s/w recovery (update).
